   2) Modular and lightweight design to convenient operation and installation.
   3) The load bearing of the bedframe is not more than 200KG, the telescopic ladder not more than 150KG, and the tent suitable for different SUV models.

2. Material & Specification
   1) Main material: Frame: Aluminium
      Ladder: Aluminium
      Tent: waterproof cloth
   2) Closed size: 212(L)x132(W)x24(H)cm
      Open size: 212(L)x132(W)x123(H)cm

3. Main parts

Support bar
Guard rail
Bedframe
HOW TO USE

1. Attached parts and tools

- U-shaped fixing plate (4pcs)
- M8x50 Bolt, hexagon head (8pcs)
- Plain washer (8pcs)
- Spring washer (8pcs)
- M8x30 Bolt, hexagon head (8pcs)
- Plain washer (8pcs)
- Spring washer (8pcs)
- M8 self-locking nut (10pcs)
- Insert with spring ball (4pcs)
- M8x12 Bolt, hexagon socket (4pcs)
- 30x30 Plastic cap (4pcs)
- Fillet (4pcs)
- Ratchet wrench 13mm (1pc)
- Hexagon bar wrench (Allen Key) 6mm (1pc)
- M8x30 Bolt, hexagon head (8pcs)
- Plain washer (8pcs)
- Spring washer (8pcs)
- Plain washer (8pcs)
- Spring washer (8pcs)
- Spring washer (4pcs)

2. Installation diagram

1) The installation diagram for the SUV with original roof rack, and the distance between the rack and the car top is bigger than 3cm.

2) The installation diagram for the SUV other than the above. Please be noted that you need to get a set of suitable roof rack and install it on the car roof before install the tent.

Note: below 3 types of roof rack recommended

- A: For the car with small rack, fixed on the rack.
- B: For the car with groove on the roof, fixed on the groove.
- C: Others, fixed on the door frame.
3. Installation steps

1) Please check the car if there are original rack on its roof and the distance between the rack and the car roof is bigger than 3cm, otherwise, you need to get a set of suitable roof rack and install it first.

2) According to the direction and size of the roof rack, loosen the screws and adjust the direction and distance of the two connecting-tubes, tighten the screws, then carry the tent onto the car roof.

3) Adjust the tent to appropriate position on the car roof. (Make sure the trunk door can be opened.)

4) Slide the M8 x 50 bolts to appropriate position from the end of the connecting tube, 2pcs at each end. Please be noted, when the distance between roof rack and car roof is less than 4cm, the short bolts M8x30 will be used instead of the long bolts M8x50.

5) The bolts pass through the hole of the U-shaped fixing plate, flat washer then spring washer in proper order, then tighten the M8 self-locking nut using a ratchet wrench. Please be noted total 4 pcs U-shaped fixing plates shall be fixed on 4 corners respectively.

6) Insert the plastic cap (30x30cm) into the end of the connecting tubes.

4. Operation & Maintenance

Unfolding method:
1) Take off the cover.

Folding method:
7) Make sure nothing inside before folding, pull out the latches from the holes of the U-shaped connecting piece, then remove the bandage hook from wheel, hold the bandages and gently loosen until the tent is folded fully.

8) Loosen the bandage, take off the ladder from the retainer. Step on the lowest crosspiece with one foot, grasp the ladder with one hand, and press the left and right switches of the lowest crosspiece to collapse the ladder. Place the collapsed ladder into trunk.

9) Cover the water proof cover after folded, hook it around the bedframe.
5. How to operate the ladder

Read all the instruction attached on the ladder before use it.

1) When open the ladder, step on the lowest crosspiece with one foot and lift-upwards to reach the required height.
2) Always check whether the crosspiece is locked before using the ladder. When in use the ladder must be at an angle of 75 degrees between the floor and ladder.
3) Step on the lowest crosspiece with one foot, grasp the ladder with one hand, and press the left and right switches of the lowest crosspiece. Do not put your hands on the crosspiece when pressing the contraction switches.
4) Hold the ladder firmly and pull downwards. The ladder will contract downwards automatically pushing each joint into one another.
5) When contracting, do not put your hands on the crosspiece as this maybe injure your hands.
6) The design of the ladder only permit one person to use it and max loading is 150Kg.

Note: To reduce the height, please collapse the ladder first, and then extend it again to the height you want.

6. Attention

01) Keep the tent windows open when folding.
02) Make sure nothing in the tent before folding, such as sleepy bag, pillow, etc.
03) Don’t put anything onto the top of the tent when the tent installed on car top whether in use or not.
04) Using wet cloth to clean the tent.
05) Please double check if the nuts that lock the bedframe together with roof rack are tightened after installation and before driving.
06) Don’t do violent exercise inside the tent.
07) The water proof cover must be covered during driving.
08) Before using the ladder, make sure that all rounds are firm and the extended parts are locked fast. Check all parts in good working condition before using. Do not use damaged, worn-out, chemically-etched ladder.
09) Set the ladder on firm ground. Do not let it stand on one leg. Do not set it on unsteady ground which has gunge, ice or snow on it, without any anti-skid device.
10) Before climbing the ladder, please make sure the crosspieces are locked, please don’t reach out your body far away. Otherwise, you will lose your balance. Face the ladder while climbing up and down, hold firmly the ladder with hands. Distribute your body weight on the middle of the rounds. Do not climb on single side. Jumping from ladder is not allowed.
11) Do not pull out the top crosspiece unless the ladder is fully extended, or it may fall. Do not press the any contract switch when in use to avoid injury to person.
12) Make sure the ladder is clean. Keep it from grease, dirt, snow, paint and chemicals.
13) Do not conduct any temporary maintenance on ladder to damage parts.
14) The bedframe and the ladder are all electric conductors. Keep away from any live parts.
15) The ladder must be at an angle of 75 degrees between the floor and ladder when in use.
16) To provide children with protection, do not leave the ladder stand alone without any attention.
17) When contracting, grasp the ladder rod by one hand, and press the left and right switches of the lowest crosspieces. Do collapse the ladder down-top sequentially and slowly. Caution to avoid hand injuries!
18) To extend the ladder, you need to pull out rounds bottom-up sequentially and lock each round carefully.
19) Before extending the ladder, make sure the ground is flat. To reduce the height, please collapse the ladder first, and then extend it again to the height you want.
20) You are not allowed to use the tent and ladder in strong wind weather.
21) The design of the ladder only permit one person to use it and max loading is 150Kg.
